

## Guidewire-FileNet Integration Framework

### Maximize your Guidewire investment

Property and casualty insurance companies selecting Guidewire as their policy or claims management solution are doing so to optimize their processes and drive new levels of efficiencies. To truly maximize the Guidewire investment, however, it is essential to automate multiple streams of document inputs. FileNet, an industry standard in managing the vast number of documents required in underwriting and claims processing, commonly accompanies a Guidewire implementation.

“Lack of attention to the document management process during the Guidewire implementation caused delays and cost overrun.”

**GUIDEWIRE PROGRAM MANAGER,**  
Fortune 500 insurance company

### Why Integrate Guidewire with FileNet

- Avoid processing delays
- Improve productivity by eliminating paper chasing
- Enhance the capture process
- Improve Guidewire implementation satisfaction
- Reduce exception processing rate
- Gain trust in the system more quickly
- Decrease processing inaccuracies
- Increase opportunities for collaboration

### The gateway to seamlessly integrating Guidewire and FileNet

By leveraging our experience in the property and casualty insurance industry, Dayhuff Group created a solution to integrate Guidewire and FileNet. This gateway solution establishes a framework to address document and workflow requirements. It does so by using the most common input streams for desktop, scanning, multifunction devices and fax for each user. To best identify those needs, Dayhuff Group provides users with a predefined questionnaire template.

The framework encompasses the capture, storage, retrieval and workflow needs of a Guidewire implementation. By understanding needs and requirements up front, Dayhuff Group speeds up the implementation process and helps to ensure successful document retrieval. The end result? More time and resources can be dedicated to successfully implementing Guidewire. It also reduces implementation risks by streamlining document management – ultimately reducing costs.

A smooth implementation of Guidewire requires a successful deployment of a document management system. The overall project is dependent on both solutions being effective. The Dayhuff Group's Guidewire-FileNet Integration Framework will reduce that risk and cost.

### Dayhuff Group Guidewire-FileNet Gateway Capabilities

- Retrieve FileNet based documents through Guidewire with ease
- Store documents on the users' desktop or office equipment
- Capture fax, email and scanned documents
- Create fraud investigation workflows
- Establish a consistent and highly accurate automated document capture process
- View and capture mobile documents

## You've invested in Guidewire.

Now let us help set you up for implementation success. Contact Dayhuff Group at 888-DAYHUFF or [sales@dayhuffgroup.com](mailto:sales@dayhuffgroup.com) to learn more.
