

“The average cost of defending a lawsuit exceeds \$1.5 million per case, with 20% to 30% of that being internal and mostly IT-related... By selecting the right technology for e-discovery and by tying that to an information life cycle management strategy, you can save your company a ton of money and your IT department a ton of time.”

Source: Debra Logan, Research VP, Gartner, Inc

Challenge:

Defending legal cases is part of doing business for most mid to large sized corporations. The number of court cases filed each year has risen 35% over the last decade and is trending more aggressively. 2009 could be a record breaking year for law suits filed. Courts are also demanding more from corporations in response to these cases. The burden is on the corporation to produce the requested information no matter what the cost to the company to acquire. Worse, organizations are confronted with significant risk, fines and negative public exposure should they lose or mishandle electronic evidence for a case.

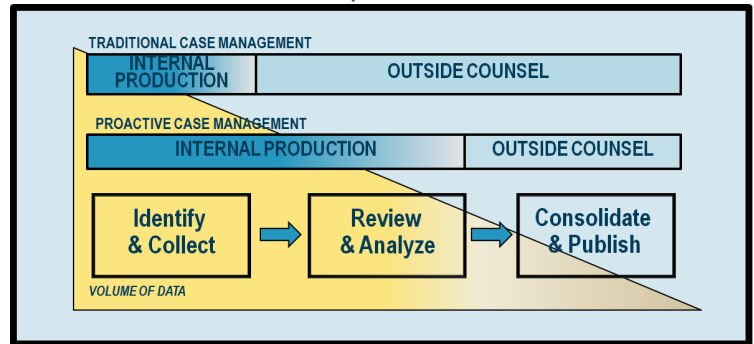

To be prepared to handle your current and future litigation demands, your organization is being compelled to take a hard look at its eDiscovery readiness, and to address several key questions:

- Can your organization identify and deliver all the emails and documents requested if a lawsuit becomes a possibility?
- Can your organization discover and produce this information quickly enough to meet the compressed timelines demanded by new regulations?
- Will your organization be successful in navigating the eDiscovery minefield, avoiding the fines, sanctions and damage to your corporate reputation that have plagued some of the most respected companies over the past few years?

Most organizations today cannot answer all these questions with an unqualified “yes.” They are forced to manage risk by handling incoming litigation requests in a reactive manner, engaging high-end legal service providers to manage eDiscovery on a case-by-case basis. For these organizations, this reactive approach results in huge bills and redundant work as the same information might be repeatedly discovered across different cases.

Solution:

The Dayhuff Group helps organizations to become eDiscovery ready. They offer an eDiscovery package that includes the industry’s most powerful discovery software and the services to implement. This package will give you the ability to perform eDiscovery across all of your information including your email, content repository and file shares. Utilizing the power of IBM eDiscovery suite of products The Dayhuff Group has created a bundled package to get your eDiscovery infrastructure up and running quickly and position your company for expansion in the future. With zero click management of emails and content you are assured your business information is safely stored with minimal effort.

The Dayhuff Group’s eDiscovery package offers industry leading software with installation, training and configuration for the price you would pay for a point solution. In less than 4 weeks we can give your organization the ability to be proactive in discovery support.

125k Starter Package:

- ▶ 50 eDiscovery Manager Licenses
- ▶ 50 eDiscovery Analyzer Licenses
- ▶ 50 Content Collector for email Licenses
- ▶ 50 Content Collector for file systems Licenses
- ▶ 50 Content Manager or FileNet CM licenses
- ▶ Installation on a Windows platform
- ▶ Configuration on a Windows platform
- ▶ Two training sessions for users
- ▶ One training session for technical staff
